Dear Participants,

Welcome!

Obstetrics- is never a dull moment!! .

In 2020, number of births for India was 24,067.83 thousand.

Natural Labor is highly complex, painful and traumatic for many women. However, very few centers in India or practitioners provide neuraxial analgesia during labor and delivery. Perhaps, lack of knowledge, nuances of labor analgesia, rapidly advancing techniques and the dynamics of labor preclude the widespread use of labor analgesia. Also the offsite locations and at times remote locations makes the task of lone anesthesiologist very challenging!! ...after all... Labor epidurals **are not merely an act of placing catheters!!**

We require to know the benchmarking for minimum standards, dosing strategies, dealing with complications and safety net in our set up.

There are so many FAQs which are still unresolved in the minds of many of us. Leaders of AOA India are delighted to announce a virtual seminar on

Labor analgesia; make it better, make it safer

09.04.2022

05:50-08:30 pm

on your popular demand

The academics framed for the seminar will benefit novices, Practitioners, and freelancers, postgraduates, fellows .The salient features of didactics focus on prepping, consenting, examining the patient prelabor, dosing, handling complications and learning the troubleshoots from our renowned faculties.

The e-seminar will add value to your daily practice. So, do not miss
